Haring holds a Bachelor of Journalism from the University of Missouri. They are generally dependable, but, like any gasoline engine, may develop problems at times. Mowers also can develop problems not directly related to engines, such as loss of power, vibrations, and uneven or poor cutting. You can troubleshoot and solve most of these problems without calling in a repair tech. Refer to your owners manual for specific details about your particular lawn mower. Make sure the spark plug is firmly connected. Remove the plug with a plug wrench to see if it is burned or fouled and replace it if necessary. Check the fuel supply and be sure the engine has fresh fuel. Keep the control bar on the handle firmly depressed. Examine the air filter by removing the top of its container with a screwdriver; clean or replace it if it is dirty. Also check the fuel cap to see if an air vent is plugged, and examine the muffler to make sure it is not clogged. Remove the air filter and clean the carburetor.

<https://www.thebiketube.com/acros-bosch-logixx-automatic-dishwasher-manual>

Spray automotive carburetor cleaner into the carburetor and on the throttle and choke control

levers to clean any debris from them. Adjust the wheels so that all are the same height. Raise all the wheels if the mower is cutting too low or is cutting so much grass it is building up under the mower deck and interfering with the blade. Also check the wheel adjustment if the mower is hard to push. Sharpen the blade or have it professionally sharpened if it is obviously dull or has nicks or broken spots. Also examine the blade if the mower is vibrating excessively; the blade may be bent or out of balance. Replace a bent blade and have an unbalanced one professionally sharpened. Send a Houzz Gift Card. Does anyone know which type of oil it uses. Do I have to mix it with the gas. How do I keep my new used mower running tip top Thank you. Straight SAE 30, 5W30 or 10W30. 10W40 wouldn't hurt it either. Bear in mind the engine will likely outlast the rest of the mower and coming from a pawnshop, some of its life is probably used up. They are perfect to help you cut down brush, weeds and longer grass on steep inclines. String trimmers are also used to edge or trim for a noticeably "finished" yard. This is attractive for maintaining large yards, tall grass and weeds, or clearing brush. Electric trimmers are competent for many general trimming tasks. Trim away grass and weeds against a fence, right up to tree trunks, and underneath shaggy boughs. Straighten edges around flowerbeds, sidewalks, and driveways. Tidy up a hillside, level scrub and saplings, overall it can give your lawn and yard great finishing touches. You'll need a gasolinepowered string trimmer for tall grass, weeds, and any more industrious projects like clearing brush or clearing rocky terrain. The biggest factors to consider when choosing a trimmer is how much property you maintain and how much power is needed to do the job. Is your landscape woody or weedy. Is your terrain rocky or sloped. Are you more interested in edging a sidewalk or clearing a hillside of saplings Choose a trimmer that doesn't feel too cumbersome because you'll be carrying it around your property.

<https://espbc.com/images/a-marriage-preparation-manual-for-couples.pdf>

Gas trimmers are heavier than electric and weigh between 10 to 14 pounds, but they are more powerful and provide the freedom of movement without being tied to a cord. Gaspowered string trimmers are available in twocycle and fourcycle models. Twocycle models require you to mix fuel and oil and keep it on hand in a separate fuel container for your trimmer. Larger 4cycle models are also available which use gasoline only, like your tractor or lawnmower oil for lubrication is in a separate reservoir in the engine. Fourcycle engines tend to be more powerful at lower speeds and run cleaner, producing fewer emissions than a 2cycle engine without a catalytic converter. Good balance can be just as critical. To check it, adjust the front handle for comfort and hold the trimmer in the cutting position with both hands. Its weight should be distributed so that you don't struggle to

keep the trimmer head several inches above the turf. Also check that all the controls are smooth and easy to reach. If you're lefthanded, make sure a gasolinepowered trimmer you're considering has a deflector that routes the hot exhaust gases rearward. Most now include one. Here are some of their advantages Most electrics use just one, which means they cut less with each revolution. Although a few have topmounted motors, most electric models have their motor on the bottom, at the cutting head. Some heavier models offer a shoulder harness, which can ease handling and reduce fatigue. Other convenient features include easyto reach and easytoadjust switches and comfortable handles. This is achieved by optimizing the starting components. Simply set the choke prime the engine and pull the starting cord. These models use strips of precut line instead of a spool, which eliminates tangles and jammed line. The way this works is you bump the trimmer head on the ground, and more line is fed out to a blade on the safety shield that cuts it to the right length.

They are generally among the lighterweight models and are easy to level for a clean cut without "scalping" your lawn. They provide additional reach beneath bushes and into other hardto reach areas. Straightshaft models produce less vibration, which adds to comfort level when your trimming job lasts more than a few minutes. Somewhat heavier than curvedshaft models, straightshaft string trimmers are also more expensive. However, they generally have more optional attachments you can purchase for edging, hedge trimming, and other trimming jobs. The following gives you a guide of what types of jobs require what cutting path. Don't hesitate to ask the dealer if he or she has a model that can be used for an onsite demonstration before making a final buying decision. Please refresh and try again. Man what a deal. It was under 100 bucks, and it came with oil. It was real easy to get it ready to mow, I just unfolded the handle and tightened 2 bolts. After adding the included oil and my own gas, we were off and going. Prime 3 times, and it starts on the first pull. It has tiny little motor. Dont let that fool you. I had a big 6HP bagger mower before this, and it took almost 2 tanks of gas to mow my yard. This mower uses less than one tank. And the motor is plenty powerful. I hate to mow the lawn, so it gets very tall. The little guy pushed through it with ease. This mower is QUIET too. You can actually hear the blade cutting the grass. It isnt all good though. This is actually my second one of this model. The first one sputtered a lot. It ran well, but it took three or so pulls to start it. I traded it out at Walmart and that fixed the problem. The only thing I noticed about this model was the rear wheels are crooked. I just grabbed them and bent the bracket straight. Not sure what happened there, but it isnt a big thing for me. I have a huge back and front yard and it takes me about 2 hrs or so to completely mow it all and this mower has yet to fail me.

www.energetisch-therapeut-estie.nl/wp-content/plugins/formcraft/file-upload/server/content/files/16272097cd181b---bravia-xbr55hx929-manual.pdf

Changed spark plug air filter and oil this year as well as cleaned everything off and it runs better than new. Cuts like a dream and doesnt use much gas. Ive read some of the other reviews but, for the bad ones, that has not been my experience. Im a 60 year old lady who is a doityourselfer. Granted my yard isnt that big it only takes an hour to mowbut this mower has proven very reliable for me. Yes, it takes maintenance like anything else you want to last. Make sure you keep good gas and oil in it. Drain all of that at the start of each year and refill; and change the spark plug if you think you need it or not. Spray some WD40 on the gears that change the wheel height. Clean the filter every couple of months unless its really oily because of tipping the mower, it takes five minutes to wash out the foam filter. But make sure you let it dry thoroughly before replacing. If you do that, you dont need a fancy mower; just get out there in this hot summer heat and mow. This runs fine! It wont run now. There is air getting into somewhere. You can tell when you prime it. I should have known better. Cant find any website that says what kind to use. I got mine at a yard sale and have run it twice. Now the thing is smoking. What do I need to do Ive had to take the plastic piece of crap carb off numerous times, yet it wont do anything for it, because the fuel delivery has something seriously wrong with it. It uses springs to govern the engine, and they never work right. Bought first

one.broke on second use the engine blew. Walmart replaced reluctantly. Replacement mower lasted one mow. Cant believe the lousy quality. Will never buy another Weed Eater product. Fall is looking like spring so Im back to doing a little mowing again. So far so good. Ill do another oil change at the end of the season and either clean or replace the air filter. Still starting and running fine so no messing with the plug.

Big note remember to run it year round and let it get up to temp so the carb doesnt get gunked up. If people would do that with anything that has carb or carbs, things would just work. How hard can it be to just run it a little year round problem solved. If you discover this and UNBEND it, the mower will not run unless the lever is placed in the original bent alignment position. This is not mentioned in the instruction manual.Once you get this thing running, it works well. If I hadnt torn up the packing box and thrown out the packing material I would have returned this piece of junk immediately to Walmart.Its a piece of crap. Its light enough to just hold upside down and it will drain out in no time. There is NO oil filter on this modelin case anyone was wondering. Definately change that oil and clean or replace the air filter. I changed the oil before the season10w30, cleaned the air filter and thats it. For 64 bucks I cant complain.for those of you that are having heck, its WALMART.return it!!! Thats why we shop at Walmart.their return policy is great and handled by a bunch of 7 dollar an hour people that dont give a crap.ha! You simply change the oil use the right type too as needed and dont top off the oil to avoid over flow or mix old oil with new oil. Remember to refill the gas after the tank runs empty after 2 mins not right away. Dont forget to read the owners manual, it pays to read before operating. Mine was a gift from the home owner who sold me the home and it has been running for 5 years. Only had it 11 days, its going right back to WalMart I shouldve known better. I bought it 4 months ago, and now it is totally useless. When I can actually get the thing started I am lucky if it mows a single strip of grass before it dies and I am unable to start it again.How can they sleep at night putting their name on this piece of crap Took it home to find out what was wrong with it. I check compression by giving it a few pulls. And it seemed find.

I then checked the oil level and it was fine. Next I checked the spark plug. It was dirty and oily. So I cleaned the spark plug with a sand paper and compressed air. Before reinstalling the spark plug I checked for spark. Aha! no spark! so I suspected a faulty spark plug, coil or kill switch!Use higher octane gasoline and keep in a smaller amounts, so gas is always fresh. Stay away from gas containing more then 10% ethanol. Because it attracts moisture and breaks down faster losing its ability to create a good combustion. That goes for all small engines! Would not start. Second one doing the same thing. I refuse to work on something new. Thats why i bought new and not used. Im taking this one back and am done with weed eater. The only reason i give it one star is because i dont have an option for lower. I had to take the air filter off to check the carb. It really isnt a carb, just a piece of cast plastic with some holes in it. The thing runs up and down up and down because the govenor is a joke too. Briggs and Stratton should be shot for this piece of junk engine. Someone thought it was funny to design something with NO adjustments at all on the engine.If you dont blow all the gas out before storage you will be screwed because carb cleaner would probably melt anything inside. It starts eventually but then goes into idle speed and seems like its going to quit. Have had it repaired with a rebuilt carb,etc.With the price of gas going up Imthink of getting an electric mower! If so how do you do that. If not, do I need to add oil and where. I know nothing and cant seem to navigate to a page that gives me a mnaufacturers manual. Hopefully Walmart will take it back.A grass catcher is totally useless to catch the clumped up cut grass. The platform on my old 1962 Gilson mower was the best made. I never once had to rake up grass after cutting, nor did I ever have to go out the next day and recut the lawn, because half of the lawn was cut uneven on the first cutting.

I never even had to sweep the sidewalk using the old Gilson. It had enough blowing power to completely blow off the walkways in two passes.Thats how much lifting and cutting power I had

under that mower, and never once did I ever have to do a recut the next day as well. Now looking for a new platform for this new motor on the weedeater that will finally do the right job for once. They just die on me for no good reason. Even when I started buying expensive ones thinking that might help, well it just helped me be out even MORE money. Then last spring when I started thinking about mowers, I remembered the used one my parents had given me 25 years ago when I first moved out on my own. It was a Weed Eater and that little sucker worked for several years MORE after they gave it to me. So this year, I went to Walmart and bought one of the 300 series and it has been AWESOME. Started right up the first time, and has started right up every time since. It keeps running and keeps cutting, as a MUCH lower price than others Ive used. Ill never buy an expensive mower again. These little suckers are workhorses. Be sure to clean the foam air cleaner bottom of foam is where oil and dirt clog filter. When it says prime 3 times do that when cold, that feature replaces a choke valve and they all start better with it. The square end of the ext fits the drain plug!! It was hard to start but hoped it would improve. Used approx. 4 times and mower just stopped running. That one is falling apart but still starts on first pull. They sure dont make them like they used to. Anything with a carb. As long as you prime with the bulb, it starts right up 1st or 2nd pull. Ill change the oil before winter this year and clean the air filter. As long as its making good power and starting ok, Ill leave the plug alone. Didnt even get 2 summers out of it. Lesson learned. Back to Sears for a Craftsman. Used it 3 times and it vibrated so much I could not feel my hands afterward.

I ran over small bush stump and the engine broke away from the deck. I actually had to laugh at how cheaply this thing is made. Lesson learned. Back to sears Craftsman for me. The only problem Ive had is rear wheels bowing out so badly that I could not use mower anymore. The cheap metal on side of mower deck broke so I drilled some holes and screwed it back together, I hope that lasts rest of summer, then Im sure it will be time to get a new one. I probably would not buy again because Id rather it last longer. My last one lasted 20 years. At first look it was nice and ran great. It started every time on the first 12 pulls. After using it 3 times it was harder to start and keep running. Once it warmed up it had all the power i needed to cut the thick 1 foot tall grass around the house. for power it lacks nothing. It is made from really thin metal and the deck lacks quality. Other than the deck it has great 5 position adjustment and the clutch lever was easy to pull and hold in. Also comes ready to run right out of the box. This was a plus. from the box to the yard in four minutes or less. Not to mention the lawn mower came with a free pint of weed eater 4 stroke motor oil and a small tool kit with a spark plug wrench. For the price you cant get a better mower. I hate raking up afterwards. I really like this mower but HATE raking up the clippings afterwards. Being able to capture the clippings would save me so much time! I had to replace 2 times so far since I bought it 15 months ago. This mower is dependable and easy to use, and I highly recommend it. I only wish it had come with a manual, as we know nothing about how to maintain it! My yard looks great. This lawnmower cuts very well. I have an average sized yard. I am very pleased with my purchase. The price is great! Its easy to do. How Simply click here to return to Lawn Mower Consumer Reviews.
